(1): Apps available soon from App Stores. The recreated Sinclair ZX Spectrum is, by design, a wireless controller for use with iOS (and selected Android) devices, games and apps including the FREE 'Recreated Sinclair ZX Spectrum' iOS / Android apps (available from App Stores). (2): New games available with each update of the apps. (3): When used as Bluetooth keyboard. (4): Currently available Bluetooth keyboards when used with iOS (and selected Android) devices can't track key releases, limiting their use to simple word processing tasks or to use as controllers for slow role playing games. The recreated Sinclair ZX Spectrum's custom hardware and clever firmware has been specifically engineered to offer optimal response for fast 'twitch' games (and indeed other apps) on iOS (and selected Android) devices. Developers are encourage to use the device as a wireless controller for their own iOS and Android apps. A 'Developer Guide' can be found at this** link. (5): Via FREE 'Recreated Sinclair ZX Spectrum' iOS / Android apps supplied. 'Apple TV' / 'Chromecast' device required. (6): Requires wireless / Bluetooth or wired / USB connectivity to be added to 'Sinclair ZX Spectrum Vega' console. **: Links placeholder and / or not yet active. Notice: No responsibility for 3rd-party, devices, games and apps is accepted. Trademarks acknowledged.
